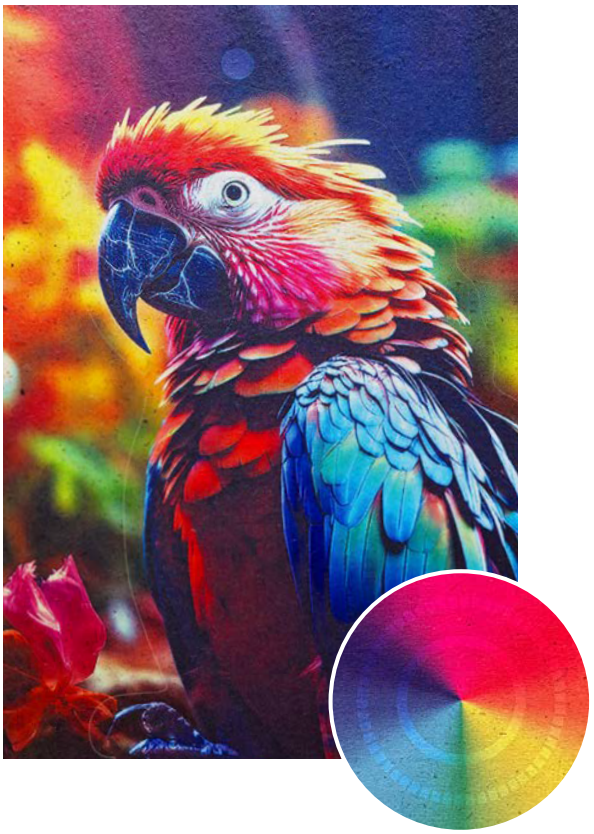
Grass Paper 80g



Description
Grass paper, natural in colour, made from 30% grass fibres, FSC® Mix Credit.

Basis Weight 80 g/m²

Liner
HERMA PH (grade 523), brown supercalendered glassine paper.

Adhesive
A permanent general purpose acrylic adhesive.

Performance Data

Min. Application Temp.:	5°C
Service Temperature:	-30°C to 120°C

Adhesive Performance
Adhesive 62A is a permanent general-purpose adhesive with very good adhesive properties on a wide range of surfaces. The adhesive has good properties at low temperatures after labelling. The final adhesion is very high on both polar and non-polar surfaces.

Shelf Life
At +20 °C and 50% relative humidity 1 year from date of manufacture. Longer storage at higher temperatures and/or higher humidity will shorten the shelf life.

Applications and Use
HERMA nature fieno (340) is made from 30 % grass fibre and 70 % virgin cellulose pulp. Thanks to its special look and feel, the material gives an authentic impression of nature. Compared to paper fibre production, energy consumption can be reduced by 97 % and water consumption by 99 % during grass fibre preparation. In total, approximately 20 % CO2 can be saved in the production of grass paper. HERMA nature fieno (340) shows very good printing results in offset and flexo printing. Preliminary tests are recommended. The colour of the eco-friendly, sustainable paper depends on the grass raw material used and can therefore vary from batch to batch.

These results are based on tests carried out by our suppliers and our own experience. We cannot give any guarantee for the optimal adhesion of the materials. We assume that the customer checks the suitability of the materials, meets his needs and decides for the right material that meets his requirements. The labels should be stored in a dryplace, at an ambient temperature of between 20° - 24 °C and protected from the effects of the weather, such as sun, rain or snow. The adhesive reacts very quickly, especially to the effects of weathering.

FSC®-Certified*
*Look for FSC®-certified products.

Can be overwritten and stamped
NORIS stamping ink #191 is recommended.
Ink dries in about 30 seconds.

As grass paper is a natural product, batches may vary slightly in colour and texture.

Due to the texture of the material, letters and small elements may come off. The ink may not reach all areas of the paper.
